# Symmetric 1- Designs from Maximal Subgroup of Degree 1771 Related to Mathieu Group $M_{24}$ 

LUCY CHIKAMAI<br>Mathematics department, Kibabii University, Bungoma, Kenya

#### Abstract

We construct symmetric 1-designs from the primitive permutation representations of degree 1771. We note that the binary row span of the incidence matrices of each design $D_{k}$ yield the code denoted $C_{k}$. We examine the properties of some of the codes $C_{k}$ where computations are possible. 2010 Mathematics Subject Classification: 94B 05C

Indexed Terms- Linear codes, Designs, Mathieu Group M24, Maximal sub-group.

## I. INTRODUCTION

Suppose G is the Mathieu group $\mathrm{M}_{24}$. The group G acts on the sextet to generates the point stabilizer $2^{6} .3 . S_{6}$. The group $G$ acts on this point stabilizer to form orbits. The orbits of this point stabilizers are 1,30, 280 and
448. For a primitive group G acting on a $\Omega$, it follows from theorem 3.4.1 and 3.4.2 that if we form orbits of the point stabilizer and take their images under the action of the full group represents the blocks of a symmetric 1 - design.

## II. SYMMETRIC 1- DESIGN

In this section we examine all designs invariant under G. Table 1 shows Designs from primitive groups of degree 1771 .t Column one represents the 1-design $D_{k}$ of orbit length k , column two gives the orbit length, column three shows the parameters of the 1-designs $D_{k}$ and column four gives the automorphism group of the design.

Table 1: Designs from Primitive Group of Degree 1771

| Design | orbit length | parameters | Automorphism Group |
| :---: | :---: | :---: | :---: |
| D90 | 30 | $1-(1771,90,90)$ | $\mathrm{M}_{24}$ |
| D240 | 280 | $1-(1771,240,240)$ | $\mathrm{M}_{24}$ |
| D1440 | 1440 | $1-(1771,1440,1440)$ | A 24 |
| D91 | 31 | $1-(1771,91,91)$ | $\mathrm{M}_{24}$ |
| D241 | 241 | $1-(1771,241,241)$ | $\mathrm{M}_{24}$ |
| D1441 | 1441 | $1-(1771,1441,1441)$ | $\mathrm{M}_{24}$ |
| D330 | 330 | $1-(1771,330,330)$ | $\mathrm{M}_{24}$ |
| D1530 | 1530 | $1-(1771,1530,1530)$ | $\mathrm{M}_{24}$ |
| D1680 | 1680 | $1-(1771,1680,1680)$ | $\mathrm{M}_{24}$ |
| D331 | 331 | $1-(1771,331,331)$ | $\mathrm{M}_{24}$ |
| D1531 | 1531 | $1-(1771,1531,1531)$ | $\mathrm{M}_{24}$ |
| D1681 | 1681 | $1-(1771,1681,1681)$ | $\mathrm{M}_{24}$ |
| D1770 | 1770 | $1-(1771,1770,1770)$ | $\mathrm{M}_{24}$ |

- Proposition 2.1. Let $G$ be the Mathieu simple group $\mathrm{M}_{24}$, and $\Omega$ the primitive G-set of size 1771 defined by the action on the cosets of $\mathrm{M}_{22}$ :2. Let $\beta$
$=\left\{M^{g}: g \in G\right\}$ and $D_{k}=(\Omega, \beta)$. Then the Aut $\left(D_{k}\right)$ is isomorphic to $\mathrm{M}_{24}$
- Proof The only composition factor of $\operatorname{Aut}\left(\mathrm{D}_{k}\right)$ is $M_{24}$. This implies that $\operatorname{Aut}\left(\mathrm{D}_{k}\right)$ is isomorphic $M_{24}$

## III. SOME LINEAR BINARY CODES

We note that the binary row span of the incidence matrices of each design $\mathrm{D}_{k}$ yield the code denoted $\mathrm{C}_{k}$. We examine the properties of some of the codes $\mathrm{C}_{k}$ where computations are possible.

- Proposition 3.1. Let $G$ be the primitive group of degree 1771 of $\mathrm{M}_{24}$ and C a linear code admitting G as an automorphism group. Then the following holds:
i. $\mathrm{C}_{448}$ is a, self- orthogonal and doubly even projective [1771, 22,264] binary code. The dual code $\mathrm{C}^{{ }_{448}}$ is a [1771, 737, 3] binary code of weight 3.
ii. $\mathrm{C}_{311}$ is a projective [1771, 23,264] binary code with 1288 words of weight 264 . $\mathrm{C}^{\perp} 311$ of $\mathrm{C}_{311}$ is a [1771, 736, 4] binary code.
- Proof
i. The weight distribution of this code is $\mathrm{C}_{448}=1+$ $1288 x^{264}+26565 x^{320}+276828 x^{352}+510048 x^{360}+$ $680064 \mathrm{x}^{376}+1772771 \mathrm{x}^{384}+807576 \mathrm{x}^{392}+$ $97152 x^{408}+21252 x^{416}+759 x^{448}$. From the weight distribution of $\mathrm{C}_{448}$, we observe that codewords have weights divisible by $4 . \mathrm{C}_{448}$ is doubly even. Hence $\mathrm{C}_{448}$ is self-orthogonal. The minimum weight of $\mathrm{C}^{\perp} 448$ code is 3 . Hence $\mathrm{C}_{448}$ is projective.
ii. The weight distribution of this code is $\mathrm{C}_{311}=1+$ $1288 x^{264}+759 x^{311}+26565 x^{350}+\ldots$ The minimum weight of $\mathrm{C}^{\perp} 311$ code is 4 . Hence $\mathrm{C}_{311}$ is projective.

## CONCLUSION

Let $G$ be the primitive group of degree 1771 of $\mathrm{M}_{24}$ and $C$ a linear code and $D$ a primitive design admitting $G$ as an automorphism group. Then the following holds:
a) There exists a self-orthogonal doubly even projective code.
b) There exist a set of Primitive Symmetric 1Designs related to $M_{24}$.
c) $\operatorname{Aut}\left(\left(D_{k}\right)^{\sim}=M_{24}\right.$
