

Human Resource Management (HRM) Practices in Ready-Made Garments Sector in Bangladesh

MEHEDI HASSAN

Ph. D Researcher, Lincoln University of Malaysia.

Abstract- Bangladesh Ready-Made Garments (RMG) had grown significantly over the last decades in every term but unfortunately quality of locally produced goods is still an issue. According to BGMEA report (2014) RMG consists around 40% manufacturing as well as 50% of the total workforce and 78% of total export earnings generated from this sector. Most of the employees in RMG are women, around 90%, where 4.2 million people are working in this sector. However, the potential growth and prospect in the Bangladesh RMG sector is huge. And for using these opportunities it should focus on the proper implementation of HR policies to emphasis quality performance. In recent knowledge-based economic condition, human resource is the most crucial resource as organizational effectiveness and efficiency is largely depends on the utilization capacity of this resource, especially in the case of Ready-made Garments industry in Bangladesh. Yet, the realities for RMG organizations are that their people remain undervalued, under-trained, and underutilized. Due to improper HR practices, labor unrest rate in RMG is high, and the employee productivity rate is lower than its competitors. As RMG is the rising sector for further investment, now a day a much concern is needed to improve and sustain garments companies growth. Human Resource Management requires much more concern in the Bangladesh RMG sector. In this aspect, literature proved that HR practices didn't get much attention, which need to be measured and analyzed in the aspect of Bangladesh RMG sectors quality performance improvement as in RMG sector human resources is the main advantage for industrial growth and sustainable competitive advantage in business. So this study is required to lift up this expectation to fulfill this research gap

Indexed Terms- Human Resource Management, Quality performance, Employee productivity, RMG

I. INTRODUCTION

In the case of ready-made garments manufacturer, Bangladesh position second in the world. Bangladesh contributed around 60% export contract with European buyers and the rest of the 40% with American buyers. In terms of investors, local investors control most of the production and manufacturing garments companies, whereas foreign investors only control 5 %. However, this sector is the main source of income in the case of national economy in a condition where, according to the World Bank, "you either export or die" (Custers, 1997). Bangladesh Garments manufacturing industry is expanding at a rate of 20% per year (Mehedi Hassan, 2014). In the industrial sector, Bangladesh set the example of cheapest and low-cost use of human resources. At the same time, Bangladesh garments industry fully labor-intensive rather than technology-oriented as Bangladesh is the cheapest labor country, the average labor cost per hour is only \$0.3 (Mehedi Hassan, 2014). Here, noteworthy to mention that since 1985, the growth rate of Bangladesh RMG sector is remarkable because of few privileges and opportunities, such as MFA, Quota and GSP, etc. (Mehedi Hassan, 2014).

Actually, the future of this sector fully depends on the effective utilization of its workforce (Mehedi Hassan, 2018). Though most of the workers in the RMG sector are female and young, where their average age limit is below 30 years (Mehedi Hassan, 2014). Bangladesh RMG sector should focus on proper implementation of HR policies to emphasis quality performance (Mehedi Hassan, 2014). As each organizations success and quality goal accomplishment is largely depends upon the capabilities of human resources (Mehedi Hassan, 2011). In this regard according to Mehedi (2012) against technological scenery, a thorough analysis of human resource management practices on manufacturing industries especially on Bangladesh

RMG sector is very much needed. HRM practices are immensely necessary for the achievement and ensuring quality performance in the organization. Therefore, effective utilization of human resources is the prime challenge and pre-condition of organizational business success (Mehedi Hassan, 2011). Issues raised in HRM practices in Bangladesh RMG sector are an attempt to improve competitiveness is still a debate both theoretically as well as empirical studies (Mehedi Hassan, 2014). So this study is required to lift up this expectation to fulfill this research gap.

Currently, Bangladesh RMG's are under tremendous pressure due to the free market economy, rapid technological development and continuous changes in customer demands. These demands emphasize the need for high levels of overall system reliability that include the reliability of human resources, machines, equipment, material handling systems, other value-adding processes, and management functions throughout the manufacturing system (Mehedi Hassan, 2019). Each organization's success and quality goal accomplishment is largely depending upon the capabilities of human resources (Mehedi Hassan, 2014). Bangladesh RMG sector should focus on the proper implementation of HR policies to emphasize quality performance (Mehedi Hassan, 2014). Unfortunately, the RMG industry is labor-intensive despite technological developments harnessing the need for appropriate HRM practices to ensure the quality of output over the right duration at the right cost (BGMEA, 2015). These have, over the years, had an adverse effect on productivity, sustainable competitive advantage, and commitment, further affecting organizational performance, time, and cost. These prompt the need for this research, which aims at providing a tool, a procedural framework, to enhance HRM in various companies operating in Bangladesh via the development of appropriate policies that will ensure high organizational performance and sustainable competitive advantage.

Therefore, the results of this research outcome will be beneficial for both theoretically and practically. The current study offers significant values for practitioners since it has considerable managerial significance. At the same time, this research will be significant in the Bangladesh garments sector by offering new insights

into the various TQM as well as HRM functions. As well as the findings of this study will be useful to government and other organizations in Bangladesh that are currently implementing HRM practices, as well as those seeking to establish HRM practices within their systems with the aim of improving performance as well as gaining sustainable competitive advantage of their businesses (Mehedi Hassan, 2014).

II. LITERATURE REVIEW

• Human Resource Management

"HRM practices can contribute to superior productivity by improving the quality of employees' work life." At this point, lack of appropriate HRM practices always enhance turnover rate, decrease the productivity rate, and huge job dissatisfaction among employees through the effective implementation of HRM practices is helping to increase overall organizational performance and growth. Therefore, according to Holtom et al. (2005), a high turnover rate is a negative sign among the workforce, which affects employee work performance and productivity. High turnover always creates the gap of production as new skills needed to be developed as the skilled performer left, new skill development to fulfill the gap is always costly (Hughes and Bozionelos, 2007). Mehedi Hassan (2014) denoted that, "due to lack of proper HR policies and procedures, labor-intensive manufacturing firms are facing shortage of workers, and high job turnover in developing countries such as Bangladesh."

Therefore incompetency of HRM practices always affects the organizational competitiveness as workforce is the main factor of quality performance (Mehedi Hassan, 2014). Inappropriate manpower planning is considered the main significant considerable factors of human resources as well as workforce shortage as well as surplus, which reflect the reality about the inconsistency of HRM practices with companies' goals (Ichniowski et al., 1997; Rahman 2011). Accordingly "although human resource management practices are indispensable in enhancing organizational performance and competitive advantage but unfortunately an inadequate number of studies have been conducted in

this area so far in the context of Bangladesh RMG sector." So, in this study, the research is conducted for the motive of fulfilling this research gap.

In this regard, the growth rate of this sector is remarkable in Bangladesh, yet, realities of the RMG sector is that their people remain undervalued, under-trained and underutilized. So the potential growth and prospect in Bangladesh RMG sector is huge. And for using this opportunities it should focused on proper implementation of HR policies to emphasis quality performance (Weeratunga, 2003; (Mehedi Hassan, 2014). Pfeffer (1994) introduced 16 HR practices which denote best practice. In context of Bangladesh ready-made garments industry, in this research we consider the following four HRM practices: recruitment and selection, job analysis, manpower planning, equal employment opportunity act (EEOA). The main focus of recruitment and selection process is the choosing the right person for the right position. According to Mládková (2005), "workers must be able and willing to cooperate and communicate and accept the way of sharing their knowledge (skills, abilities and experience) based on reciprocity, reputation and altruism." Schuler (1987) give emphasized in his study on more general, implicit and less formalized selection criteria are proposed by some authors. In Bangladesh ready-made garments, they don't follow any defined recruitment and selection policies which largely affect employees' turnover and competitiveness (Mehedi Hassan, 2014).

On the other hand, Geisler (2006) stated that, "manpower planning is the process – including forecasting, developing and controlling by which a firm ensures that it has- the right number of people, the right kind of people, at the right places, at the right time, doing work for which they are economically most useful". Manpower planning is associated with organizational optimum size of workforce, appropriate training design, compensation system design as well as the future vision of the workforce management which are highly recommended in case of TQM practices in Bangladesh RMG sector (Ahamed, 2013). According to Bansari (2010), "most garments factories in Bangladesh pay little attention to labor standards and labor rights, disallow trade union activities, unsafe working environment, and ineffective laws and discard fair labor practices, and compliance

enforcement is limited and limited role of stakeholders." According to Ahamed, F. (2011), "there is a rising fear in Bangladesh that the readymade garments sector may face a decline in demand and social compliance in the RMG industry is a key requirement for most of the world's garments buyers which ensures labor rights, labor standards, fair labor practices and a Code of Conduct."

So for ensuring quality practices and gaining sustainability in RMG sector of Bangladesh much attention should be given to EEO approach to avoid labor unrest and lack of quality performance. Job analysis is required a huge impact on starting to implement any HR practices in organization (Mehedi Hassan, 2014). According to Cascio (1991) for evaluating the organizational performance effectively job analysis also associated with performance management and compensation, recognition and reward. Therefore, according to Dobbins et al. (1991), individual skills and competencies are focused in job analysis, which is needed for empowering employees, which is essentially significant in the case of Total Quality Management (TQM) implementation. Lastly, measuring job fitness is also a part of the job analysis process, which includes change management, job classification, creativity, and job design, and job rotation (Mehedi Hassan, 2014). In this research, job analysis requires more significant attention in the context of Bangladesh ready-made garments industry to gain sustainable competitive advantage for implementing TQM.

Therefore, according to Absar (2014) HRM practices were not given proper acknowledgements and preferences in aspect of Bangladesh RMG sector. So based on literature it is easily understandable that HR practices didn't get much attention which needs to be measured and analysis in the aspect of Bangladesh RMG sectors quality performance improvement as in RMG sector human resources is the main advantage for industrial growth and sustainability in business. So this study is required to lift up this expectation to fulfill this research gap. This study will also help the policy makers and government to formulate and implement the manpower policies as the Bangladesh RMG sector largely depends on workforce efficiency and proper utilization of inexpensive manpower.

III. BANGLADESH RGM SECTOR'S HRM CONDITION

The ready-made Garments Industry contributed a lot to the development of the Bangladesh economy. Bangladesh Garments manufacturing industry is expanding at a rate of 20% per year (Siddiqi, 2005;

Johir, Saha, and Hassan, 2014), and around 76% of the export earnings are coming from RMG sector (BEPB, 2015). Currently, 4.2 million workers are working in this sector, where 4490 manufacturing units are in operation (BGMEA, 2015).

Table 1: Membership and employment

Years	No. of garments factories	Employment in million workers
1984-85	384	0.12
1985-86	594	0.20
1986-87	629	0.28
1987-88	685	0.31
1988-89	725	0.32
1989-90	759	0.34
1990-91	834	0.40
1991-92	1163	0.58
1992-93	1537	0.80
1993-94	1839	0.83
1994-95	2182	1.20
1995-96	2353	1.29
1996-97	2503	1.30
1997-98	2726	1.50
1998-99	2963	1.50
1999-00	3200	1.60
2000-01	3480	1.80
2001-02	3618	1.80
2002-03	3760	2.00
2003-04	3957	2.00
2004-05	4107	2.00
2005-06	4220	2.20
2006-07	4490	2.40
2007-08	4743	2.80
2008-09	4925	3.50
2009-10	5063	3.60
2010-11	5150	3.60
2011-12	5400	4.00
2012-13	5876	4.00
2013-14	4222	4.00
2014-15	4296	4.20

Source: BGMEA (2015)

Each organizations success and quality goal accomplishment is largely depends upon the

capabilities of human resources (Budhwar & Debrah, 2011). Bangladesh RMG companies don't provide proper training to the employees as they focus on cost

reduction most but training and skill development is essential for quality performance (Ahamed, 2013). That's why employee productivity rate comparatively low rather than competitors (Absar & Mahmood, 2014). Therefore, Ernst and Young (2007) stated that Bangladesh has the 7th largest work force i.e., 69 million of the world. Potential growth and prospect in Bangladesh RMG sector is huge. And for using this opportunities, it should focused on proper implementation of HR policies to emphasis quality performance (Weeratunga, 2003; Absar & Mahmood, 2014). In this regard, Mamun and Islam (2001) stated where they conducted research on RMG sector that the ready-made garments enterprises workers' productivity needs to be improved through proper HRM practices. According to Jahir, Saha, and Hassan (2014), "to face challenges of globalization and the reasons for the low productivity of laborers are unsystematic recruitment and selection of workers, unavailability of training facilities, inadequate financial facilities, and low motivation level of workers."

The situation of Bangladesh RMG sector is critical as there are lack in practice of HRM practices, which causes lots of problems (Ahamed, 2011). Control of lower-level employees is usually done by line supervisors who are not an expert of employee management as the supervisors do not have proper training, nor knowledgeable about compliance acts neither familiar about HR rules and procedures. So most of the time, due to their inefficiency, employees are demotivated as well as dissatisfied, which reflects their quality performance (Rock, 2010). According to Parul Akhter (2015), most of the garments factories have no well-defined HR department. Actually, HR departments are fully concerned about the formulation and implementation of HR rules, regulation and practices as well as make sure employees will be motivated through these activities which are essential for the success in Bangladesh RMG sector. According to Rahman (2012, "working conditions in the RMG sector are poor and the factories often do not have HRM units and workers' rights are minimal." In this regard, Ahamed (2013) stated that the absence of an HR function in the RMG sector creates difficulties with workers. In Bangladesh, most of the RMG factories have automatic machinery. But unfortunately, coupled with workers lack of education,

skills and technical knowledge, this can lead to accidents causing death or injury (BGMEA, 2015). Without appropriate HR policies in Bangladesh RMG sector as well as lack of HR unit in the organization, most of the garments employees are not aware and familiar about IR (Industrial Relations) rules and acts (Ahamed, 2011). In this study selection of RMG sector as research area is worthy for further research as there is a huge research gap.

The working environment in the RMG sector is deficient in various ways focused health and safety and the work environment (Akhter, 2015). As a result, workers often suffer disease and are injured or even killed. The HRM department ensures that employees' rights are not violated, and that the organization provides better working condition (Rahman, 2012). Mondy and Noe stated that safety is the act of protecting employees from injuries caused by work-related accidents and health as well as keeping employees free from physical or emotional illness". According to Ahamed, F. (2011) the absence of any HR functions in the RMG sector can be a factor in serious labor unrest. In this aspect, Bangladesh RMG sector accidents are quite common and without the practice of EEOA, employee didn't get proper care which creates employees demotivation as well as labor unrest which largely affect quality performance (BGMEA, 2014).

However, usually no HR unit is found in most of the small companies in Bangladesh RMG sector where the number of members of the organization is less than 100 (Sharmin, 2014). In Bangladesh RMG sector, establishment of HR departments has the potential to facilitate productivity and sustainability (Bansari, N., 2010; Ahamed, F., 2011) Due to improper HRM practices, Bangladesh ready-made garments industry sustainability, as well as competitiveness, largely hampered (Bansari, N., 2010; Ahamed, F., 2011). So there is a research gap to implement HR practices in Bangladesh RMG sector.

Several researchers conducted studies on working condition in Bangladesh RMG, which are essential for developing the EEO and compliance. In this regard, according to Ahamed F. (2011), "in fact working conditions in the RMG sector are below standard and do not meet the ILO standards." Ahamed F. (2011)

also stated that, "labor standards and rights are commonly ignored in the RMG factories in Bangladesh: poor practices include the absence of trade unions, informal recruitment, and irregular payment, sudden termination, wage discrimination, excessive work, and abusing child labor." So lots of accidents happened previously as for example, "Rana Plaza" incident. At the same time, employee, health and facilities are serious issues in the garments sector because of absence in the implementation of labor laws and appropriate HR practices.

On the other hand, in RMG sector employee recruitment is informal they don't provide any appoint letter as formal legal documents and for this reason employee could not able to claim compensation against any misfortune happened with them. In this regard according to Bansari (2010), "in case of Bangladesh RMG companies, employees are vulnerable to losing their jobs at any time and have fear of losing their jobs and lack of alternative job opportunities compel workers to continue in unsatisfactory employment." Kumar (2006) stated that, "garments workers are concerned with long working hours or double consecutive shifts, personally unsafe work environment, poor working conditions, wage and gender discrimination and employers treat the RMG workers as slaves, exploiting workers to increase their profit margins and keep their industry competitive in the face of increasing international competition".

However, Alam (2004) pointed out that lots of problems remain in the Bangladesh RMG sector, such as suppressed work schedule, no break time, inappropriate overtime procedure, physical harassment, etc. though management are not aware about the appropriate policy and implementation of HR rules and practices. According to Majumder P (1998), "work areas are often overcrowded with limited workspaces, causing occupational hazards such as musculoskeletal disorders and contagious diseases." Bangladesh RMG owners are under pressure to oblige all the code of conduct for sustaining their business operation. That's why they are more concerned about this research study, which will help them to build-up a proper quality culture with the help of effective HRM practices.

In this regard, according to Ahamed (2011), "workers often try to complement their low wages by overtime, which in effect is mandatory practice in Bangladesh RMG factories." But unfortunately, most of the garments workers are illiterate they don't have appropriate knowledge about quality work environment as well as labor rights. The wage rates of RMG sector compare to other competitor countries are given below:

Table 2: Inter-country comparative average hourly wage in the RMG industry

No.	Country	Wages(\$)/hour
1	Germany	25.00
2	USA	16.00
3	Turkey	7.3
4	South Korea	5.00
5	Mexico	2.40
6	Thailand	1.75
7	Poland	1.40
8	Vietnam	0.85
9	China	0.5
10	Pakistan	0.41
11	Indonesia	0.40
12	India	0.35
13	Cambodia	0.32
14	Nepal	0.30
15	Bangladesh	0.15

Source: Ahmed F., (2011)

An interesting finding is that due to excessive use of women workers, the wage rate is ultimately low (Ahamed, 2011). Another considerable factor is there is abandon supply of human resources who are able to work in Bangladesh RMG sector. So, because of labor availability the wages rate is comparatively low. The offered the cheapest wages in the world. Muhammad (2012) stated that in reality, garments worker are not entitled to any fringe benefits, including accommodation allowances, health care, emergency funds, or transportation. In this regard, according to ILO and BGMEA (2014) glass ceiling is another considerable problem remains in Bangladesh RMG sector. At the same time discriminated wage rate among male and female employees are huge. The

following table shows the gender discriminated wages rate.

Table 3: Gender differentials in wages in Bangladesh RMG sector

Categories	Male wages USD \$/per month	Female wages USD \$/per month
Operator	28.65	19.53
Cutting	50.02	15.00
Ironer	24.08	14.06
Sewing helper	15.25	9.69
Cutting helper	19.22	10.64
Finishing helper	15.37	13.00
Folder	19.42	14.71

Source: Absar (2010)

In this regard, Garments worker often change their jobs because of wage arrears, lay-offs, irregular payment, excessive working hours, forced labor, ill-health or harassment from bosses and their security guards (DWP, 2014). Bangladesh RMG sectors HRM implementation and practices play vital role for achieving employees' job satisfaction, better productivity, employee efficiency and skill development. It is another area where Bangladesh severely lags behind most of its competitors (Richthofen, 2012). Therefore, on the basis of the above literature, this research is much needed as there is a huge research gap.

IV. DISCUSSION

Based on above discussion, for ensuring the performance development and sustainability of Bangladesh RMG sector effective implementation of HRM practices should be assured. Khan (2010) stated that, "HRM is the essential factor for sustainable competitive advantage and success of any organization." According to Schuler (1990), "the practice of HRM enables firm to achieve resource optimization and continuous improvement in production." At the same time lack of appropriate HR always create high turnover rate, increases absenteeism as well as reduces profit (Johir, Saha, & Hassan, 2014). In this regard, Marchington and Wilkinson (2008) stated that, "HRM is a distinctive approach of employee management to achieve

competitive advantage through job satisfaction and commitment." Several criteria works behind the relationship between HRM practices and sustainable competitive advantage, which need to be further tested (Batt, 2002; Ahamed, 2013).

According to Batt (2002), "if the firm invests on human capital it may increase the worker's productivity." Appelbaum et al. (2000) stated that, "job enlargement and increasing autonomy of workers will decrease the amount of wastage and the inefficiency rate in production, as the firm takes the advantage of unused skills from non-managerial workers." So through job satisfaction, HRM practices can ensure employee motivation, which will directly relate with quality performance of individual as well as organization. In this regard, Ichniowski et al. (1997) denoted that, "good HRM practices increase the motivation of workers due to increased job satisfaction." Job satisfaction also will increase quality performance. MacDuffie (1995) mentioned, "Good HRM policies reduce the rate of job turnover that consequently trims downs the cost of recruitment and selection, and increases the benefits of investments in human capital." At the same time, Ichniowski et al. (1997) stated, "higher employee motivation will raise the tendency among the workers to do a better job, and it will also increase their commitment towards the organization."

On the basis of the above discussion, this research got the potentiality to vary the statement of whether human resources practices have a positive relationship with Bangladesh RMG sector to gain sustainable competitive advantage or not as there is a research gap for it.

CONCLUSION AND FURTHER RESEARCH

Though the growth rate of Bangladesh RMG sector is immensely high but unfortunately, from the starting of the implementation practices of HRM did not receive its due and proper attention. This research will be very much beneficial for both owners as well as policy and decision-makers. On the basis of this research, some recommendations are: first, always maintain and follow proper rules and documentation for the employment of employees. Second, establish justified wages and compensation policy, not the discriminated

payment. Third, every employee should provide appropriate training opportunities. Fourth, follow and maintain all HRM practices according to Bangladesh Labor Law 2006. Fifth, the working hours and overtime policy should be maintained and justified legally and ethically. Sixth, the trade unions and collective bargaining option should be opened for the employees. Seventh, fairly and ethically practice "owner-labor-government agreement of 22 & 23rd May, 2006". Eighth, wages and compensation should be adjusted with incremental payment as well as inflation and work-life balance. Ninth, maintained appropriate and proper "safety and security law" of workplace safety. Tenth, ensure quality culture and reduce work stress and misbehave towards workforce. Eleventh, do not recruit child labor or minor which is a regular practice in Bangladesh RMG sector. Twelfth, maintained, follow and updated "BGMEA & Government rules and regulation."

The current study offers significant values for practitioners since it has considerable managerial significance. At the same time, this research will be significant in the Bangladesh garments sector by offering new insights into the various HRM functions. These initiatives will cover the latest research gap on the implementation of HRM practices in the literature. Additionally, it is believed that this study can be replicated in other context such as other product and service industries in Bangladesh. Therefore, this study will assist and explore for future research prosperities and opportunities in HRM area of research. Overall, this research can help to build up remarkable understanding of practicing HRM in Bangladesh RMG sector as well as contribute significantly in building the scientific knowledge in the subject of the research area.
