#### Abstract

In this paper, we extend the class of (BQ) operators acting on a complex Hilbert space $H$ to the class of (BQ) of order n. An operator if $T \in$ $B(H)$ is said to belong to class $(B Q)$ of order $n$ if $T$ ${ }^{* 2 n} T^{2}$ commutes with $\left(T{ }^{* n} T\right)^{2}$ that is $\left[T{ }^{* 2 n} T^{2},(T\right.$ $\left.\left.{ }^{* n} T\right)^{2}\right]=0$. We examine properties that this class is honored to have. We examine the relation of this class to that of class (Q) order $n$.

Indexed Terms- Class (BQ) of order n, Class (BQ) operator, Normal operator of order $n$.

## I. INTRODUCTION

Throughout this paper, H denotes the usual Hilbert space over the complex field and $B(H)$ the Banach algebra of all bounded linear algebra on an infinite dimensional separable Hilbert space $H$. An operator $T \in B(H)$ is said to be class $(\mathrm{Q})$ if $\mathrm{T}^{* 2} \mathrm{~T}^{2}=(\mathrm{T} * \mathrm{~T})^{2}(1)$, class $(\mathrm{Q})$ of order n if $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}^{2}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2}$, class (BQ) if $\mathrm{T}^{* 2} \mathrm{~T}^{2}(\mathrm{~T} * \mathrm{~T})^{2}=(\mathrm{T}$ $\left.{ }^{*} \mathrm{~T}\right)^{2} \mathrm{~T} \quad{ }^{* 2} \mathrm{~T} \quad{ }^{2} \quad$ (5). A conjugation on a Hilbert space H is an anti-linear operator C from Hilbert space H onto itself that satisfies

Cx, Cyi = hx, yi for every $x, y \in H$ and $C^{2}=I$. An operator $T$ is said to be complex symmetric if $\mathrm{T}=\mathrm{CT}{ }^{*} \mathrm{C}$.

## II. MAIN RESULTS

Theorem 1. Let $T \in B(H)$ be such that it's a (BQ) of order n , then the following are also equivalent; (i). $\lambda \mathrm{T}$ for any real $\lambda$ (ii). Any $S \in B(H)$ that is unitarily equivalent to $T$. (iii). The restriction T-M to any closed subspace M of H.

Proof. (i). The proof is trivial. (ii). Let $S \in B(H)$ be unitarily equivalent to $T$, then there exists a unitary operator $U$ $\in \quad B(H) \quad$ with $S=U * T U$ and $S^{*}=U * T * U$. Since $T \in B(Q)$ of order

(iii) . If T is in class (BQ) of order n , then; $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}^{2}\left(\mathrm{~T}{ }^{* n} \mathrm{~T}\right)^{2}=\left(\mathrm{T} \quad{ }^{* n} \mathrm{~T}\right)^{2} \mathrm{~T}^{* 2 \mathrm{n}} \mathrm{T} \quad{ }^{2}$ 。 Hence;

| (T/M) | *2n | (T/M) | 2 | \{(T/M) |  |  | (T/M) $\}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $=(\mathrm{T} / \mathrm{M})$ | 2 |  |  | (M) |  |  | (T/M) ${ }^{2}$ |

$$
=(\mathrm{T} * 2 \mathrm{n} / \mathrm{M})\left(\mathrm{T}^{2} / \mathrm{M}\right)\left\{\left(\mathrm{T}^{* n} / \mathrm{M}\right)(\mathrm{T} / \mathrm{M})\right\}\left\{\left(\mathrm{T}^{* \mathrm{n}} / \mathrm{M}\right)(\mathrm{T} / \mathrm{M})\right\}
$$

$$
=\quad\left\{\left(\mathrm{T} \quad{ }^{* \mathrm{n}} \mathrm{~T}\right)^{2} / \mathrm{M}\right\} \quad\left\{\mathrm{T} \quad{ }^{* 2 \mathrm{n}} \mathrm{~T} \quad{ }^{2} / \mathrm{M}\right\}
$$

$$
=\left\{\left(\mathrm{T} \quad{ }^{* \mathrm{n}} / \mathrm{M}\right) \quad(\mathrm{T} / \mathrm{M})\right\}^{2}(\mathrm{~T} / \mathrm{M}) \quad{ }^{* 2 \mathrm{n}}(\mathrm{~T} / \mathrm{M})^{2}
$$

$$
\text { Thus } \quad \mathrm{T} / \mathrm{M} \quad \in(\mathrm{BQ}) \text { of order } \mathrm{n} .
$$ Theorem 2. If $T \in B(H)$ is in Class $(Q)$ of order $n$, then $T \in \quad(B Q)$ of order $n \quad$. Proof. If $T \in(Q)$ of order $n$, then $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2} \quad=\quad\left(\mathrm{T} \quad{ }^{* n} \mathrm{~T}\right)^{2}$ post multiplying both sides by $\mathrm{T} *^{2 \mathrm{n}} \mathrm{T} \quad{ }^{2}$; $\mathrm{T} \quad{ }^{* 2 \mathrm{n}} \mathrm{T} \quad{ }^{2} \quad \mathrm{~T} \quad{ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2}=\left(\mathrm{T} \quad{ }^{* \mathrm{n}} \mathrm{T}\right)^{2} \quad \mathrm{~T} \quad *^{2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{2}$ $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T} \quad{ }^{2} \quad \mathrm{~T} \quad{ }^{* n} \mathrm{TT} \quad{ }^{* n} \mathrm{~T}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2} \quad \mathrm{~T} \quad{ }^{* 2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{2}$ $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2}\left(\mathrm{~T}{ }^{* n} \mathrm{~T}\right)^{2}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2}$ T ${ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2}$ 。 Theorem 3. Let $S, T \in(B Q)$ of order $n$. If both $S$ and T are doubly commuting, then ST is in (BQ) of order n. Proof.

$(\mathrm{ST})^{* 2 \mathrm{n}} \quad(\mathrm{ST})^{2} \quad\left((\mathrm{ST})^{* \mathrm{n}} \quad(\mathrm{ST})\right)^{2}$ $=\mathrm{S}^{* 2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{* 2 \mathrm{n}} \quad \mathrm{S}^{2} \quad \mathrm{~T} \quad{ }^{2} \quad\left((\mathrm{ST})^{* n} \quad(\mathrm{ST})\right)\left((\mathrm{ST})^{* \mathrm{n}}(\mathrm{ST})\right)$ $=S^{* 2 n} T{ }^{* 2 n} S^{2} T^{2}\left(\left(S^{* n} T{ }^{* n}\right)(S T)\right)\left(\left(S^{* n} T{ }^{* n}\right)(S T)\right)$
 $=S^{* 2 n} T{ }^{* 2 n} S^{2} T^{2} S^{* n} \quad \mathrm{ST}{ }^{* n} \mathrm{TS}^{* n} \quad \mathrm{ST}{ }^{* n} \mathrm{~T}$ $=\begin{array}{llllllllll} & \mathrm{T} & & * 2 \mathrm{n} & \mathrm{T} & 2 & \mathrm{~S}^{* 2 \mathrm{n}} & \mathrm{S}^{2} & \mathrm{~S}^{* n} & \mathrm{SS}^{* n}\end{array} \quad \mathrm{ST} \quad{ }^{* n} \mathrm{TT} \quad{ }^{* n} \mathrm{~T}$
$=\begin{array}{lllllllll} & \mathrm{T} & \quad{ }^{* 2 \mathrm{n}} & \mathrm{T} & 2 & \mathrm{~S} * 2 \mathrm{n} & \mathrm{S} & 2 & \left(\mathrm{~S}^{* n} \mathrm{~S}\right)^{2} \mathrm{~T}\end{array} \quad{ }^{* n} \mathrm{~T} T \quad{ }^{* n} \mathrm{~T}$

```
=T *2n}\mp@subsup{T}{}{2}(\mp@subsup{S}{}{*n}S\mp@subsup{)}{}{2}\mp@subsup{S}{}{*2n}S\mp@subsup{S}{}{2}T\mp@subsup{T}{}{*n}TT *nT (Since S E (BQ)
of order n).
=(S*nS)2 T T *2n Tl 2
=(S*nS)
=(S*nS)
order n ).
=((S*n}S)(T\quad\mp@subsup{}{}{*n}\textrm{T})\mp@subsup{)}{}{2
=((S*nT T *n (ST))}\mp@subsup{)}{}{2
= ((ST)*n(ST)) 2 (ST)*2n}\quad(ST)\mp@subsup{)}{}{2
Thus ST E (BQ) of order n .
```

Theorem 4. Let $T \in B(H)$ be a class $(B Q)$ operator of order n such that $\mathrm{T}=\mathrm{CT}{ }^{* n} \mathrm{C}$ with C being a conjugation on H . If C is such that it commutes with T ${ }^{* 2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{2}$ and $\left(\mathrm{T}{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}$, then T is a class ( Q ) operator of order n . Proof. Let $T \in(B Q)$ of order $n$ and complex symmetric, then we have; $\mathrm{T}^{* 2 \mathrm{n}} \mathrm{T}^{2}\left(\mathrm{~T}{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}=\left(\mathrm{T}{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}$

| T |  |  | ${ }^{* 2 \mathrm{n}} \mathrm{T}$ | ${ }^{2}$ |
| :--- | :--- | :--- | :--- | :--- |
| and | T | $=$ | CT | ${ }^{* \mathrm{n}} \mathrm{C}$. | hence;

$\mathrm{T} \quad{ }^{* 2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{2}\left(\mathrm{~T} \quad{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}=\left(\mathrm{T} \quad{ }^{* \mathrm{n}} \mathrm{T}\right)^{2} \quad \mathrm{~T} \quad{ }^{* 2 \mathrm{n}} \quad \mathrm{T} \quad{ }^{2}$ T ${ }^{* 2 \mathrm{n}} \mathrm{T}^{2}$ CTCCT $^{* \mathrm{n}}$ CCTCCT ${ }^{* n} \mathrm{C}=\left(\mathrm{T}{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}$ CTCCT ${ }^{* \mathrm{n}}$ CCTCCT ${ }^{* n}$ C.
T ${ }^{* 2 \mathrm{n}} \mathrm{T}^{2} \mathrm{CTT}{ }^{* \mathrm{n}} \mathrm{TT}{ }^{* \mathrm{n}} \mathrm{C}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2} \mathrm{CTT}{ }^{* n} \mathrm{TT}{ }^{* n} \mathrm{C}$ $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2} \mathrm{CT}{ }^{2} \mathrm{~T}{ }^{* 2 \mathrm{n}} \mathrm{C}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2} \mathrm{CT}{ }^{* n} \mathrm{TT}{ }^{* n} \mathrm{TC}$ $\mathrm{T}{ }^{* 2 \mathrm{n}} \mathrm{T}{ }^{2} \mathrm{CT}{ }^{* 2 \mathrm{n}} \mathrm{T}^{2} \mathrm{C}=\left(\mathrm{T}{ }^{* n} \mathrm{~T}\right)^{2} \mathrm{C}\left(\mathrm{T}{ }^{* \mathrm{n}} \mathrm{T}\right)^{2} \mathrm{C}$. C commutes with $\mathrm{T}{ }^{* 2} \mathrm{~T}^{2}$ and $(\mathrm{T} * \mathrm{~T})^{2}$ thus we get ; $\mathrm{T} \quad{ }^{* 2 \mathrm{n}} \mathrm{T} \quad{ }^{2} \mathrm{~T} \quad{ }^{* 2 \mathrm{n}} \mathrm{T} \quad{ }^{2}=\left(\mathrm{T} \quad{ }^{* \mathrm{n}} \mathrm{T}\right)^{2} \quad\left(\mathrm{~T} \quad{ }^{* \mathrm{n}} \mathrm{T}\right)^{2}$. which implies $T{ }^{* 2 n} T^{2}=\left(T{ }^{* n} T\right)^{2}$ and hence $T \in(Q)$ of order $n$.
