[1, 2, 3] Medi-Caps University, Indore (M.P)

Abstract- Portfolio provides personal information of that person in any one field or information of any field. There are also many types of portfolios such as employee portfolio, student portfolio, company portfolio, business portfolio and portfolios are also made in different ways such as paper portfolio, digital portfolio, website portfolio etc. In this generation portfolio is very important for all the fields because inside the portfolio all the information is kept in detail. With its help, it is very easy to give and take information in any field.

I. INTRODUCTION

A portfolio has been created in which information has been given about a Tunisian person who is a front-end developer and his name is Steve Milner's. In this, we have given all their information like in Bachelor degree, Master degree in study. Along with this, the skills are in which field and language, that has also been told. Portfolio is a big form of resume and at the same time it is more important than resume this, we have added many new features which show the portfolio very well like photos, video, navigation var, this navigation bar gives the information of each field in detail. This portfolio has been created so that any person or company can easily send or receive information without any problems. All the information is kept in digital form which will not be lost easily and can keep the information for a long time. Digital portfolio should also be brought so that in this new generation information can also be stored, sent, and received in a new way.

II. LITERATURE REVIEW

Portfolio for employees is a website which is showing all the personal information of Steve Milner in details. With the help of portfolio, it will be very easy to get a job in any field, as well as to the job provider because complete information is received from the portfolio.In this portfolio, we have created

five pages, which are Home, About, Portfolio, Content and Blog.

Home - Steve Milner's photo has been put in it and a little bit of life has been told along with it. Here, a button has also been given to open the About page, from which we can open the About page from here or we can open the About page from the new page as well.

About Me - In about me page we have told such as name, age, nationality, address, phone number etc.It is also mentioned that how many years of experience, projects, awards etc. From about page, we can also download direct CV. Skills are told in the form of percentage. Like HTML, JavaScript, CSS, React.js, angular, PHP, WordPress, jQuery.

In education, we have told that he did Bachelor's degree from Tunis High School, Master's degree from Kiev University, Engineer's degree from Oxford University.

Portfolio- I have given five menu buttons. In which there are only picture.

Contact- If any new employees want to come in the content page, then they can fill the column containing their name, subject, your message, send mail or can also call.

Blogs page - In the blog page, employees can share their blogs.

We have given the option of dark mode in the portfolio so that we can change it.

If we talk about the future, then we can convert this portfolio website into an application and provide the facility of easy portfolio creation for everyone.

In this website we have used node.js for backend and HTML, CSS and react.js for front end. This portfolio

is different from other portfolios because we can send it to any job requirement company through the link as well as if a person requires a job, then with the help of this portfolio he can also apply for the job and can take the information of this field.

CONCLUSION

At last, I would like to share my experience while doing this project.

I learnt many new things about the given topics. The best thing which I can share is that I developed more interest in this topic. This project gave me real insight into the portfolio world.

At the end of the portfolio, it is just one of the several ways employers can learn about you. It is important because it provides a place to not only list your experience, but to show your experience and review it in greater detail than a resume.
