

Employee Perceptions of Recruitment Channels and Their Impact on Initial Job Performance in Indian Organizations

THALLA AISHWARYA

Department of Management Studies, Siva Sivani Institute of Management, Hyderabad, India

Abstract-*This study examines employee perceptions of different recruitment channels and their impact on initial job performance in Indian organizations. Recruitment channels such as campus placements, job portals, employee referrals, recruitment consultants, and walk-in interviews were analysed to understand their influence on job satisfaction, job involvement, organizational commitment, and early job performance. Primary data were collected from 130 employees and 30 HR recruiters using structured questionnaires. The study adopts a quantitative research design and employs one-way ANOVA and Tukey post-hoc tests for statistical analysis. The findings indicate that while job satisfaction and involvement do not significantly differ across recruitment channels, early job performance varies notably based on the recruitment source. Campus recruitment and employee referrals demonstrate superior early performance outcomes compared to other channels. The study highlights the strategic importance of recruitment channels in shaping early employee productivity and provides actionable insights for improving recruitment effectiveness.*

Keywords: *Recruitment Channels, Employee Perception, Job Performance, Job Satisfaction, Human Resource Management*

I. INTRODUCTION

Recruitment is a vital human resource function that directly influences workforce quality and organizational performance. It represents the first formal interaction between an organization and prospective employees, shaping their expectations, attitudes, and psychological attachment. In a highly competitive employment market, organizations utilize multiple recruitment channels such as campus placements, job portals, employee referrals, recruitment consultants, and walk-in interviews to attract talent.

Each recruitment channel varies in terms of reach, cost, interaction level, and information transparency. These variations influence employee perceptions regarding organizational fairness, role clarity, and

growth opportunities. Positive recruitment experiences contribute to higher motivation and faster adjustment during the initial phase of employment, while poor recruitment practices may lead to mismatched expectations and reduced performance.

Although recruitment effectiveness has been widely studied, limited research focuses on how recruitment channels influence early job performance through employee perceptions, particularly in the Indian context. This study aims to bridge this gap by examining the relationship between recruitment sources and initial job performance outcomes.

II. RESEARCH METHODOLOGY

Research Design

The study adopts a descriptive and quantitative research design. A non-experimental approach is used to analyse employee perceptions and early job performance without manipulating variables, making it suitable for comparative analysis across recruitment channels.

Data Source and Sample

Primary data were collected using structured questionnaires from employees and HR recruiters across multiple sectors including IT, education, manufacturing, and services.

- Number of employee respondents: 130
- Number of HR recruiter respondents: 30
- Sampling technique: Purposive sampling

Employees with a minimum tenure of three months were included to ensure meaningful evaluation of early job performance.

Data Collection Instrument

Two separate questionnaires were designed for employees and HR recruiters. Responses were measured on a five-point Likert scale ranging from “Strongly Disagree” to “Strongly Agree.” The

instrument measured variables such as job satisfaction, job involvement, organizational commitment, punctuality, reliability, and task completion.

Tools and Techniques of Analysis

The following statistical tools were employed:

- Descriptive statistics
- One-way ANOVA
- Tukey HSD post-hoc test

Data analysis was conducted using Microsoft Excel and PSPP software.

Ethical Considerations

Participation was voluntary, anonymity was maintained, and no confidential or sensitive information was collected, ensuring adherence to ethical research standards.

III. RESULTS AND DISCUSSION

Table 1: Recruitment Channel Wise Early Job Performance

Recruitment Channel	Mean Score	Standard Deviation	Performance Level
Campus Recruitment	4.12	0.62	High
Employee Referral	4.05	0.58	High
Job Portals	3.46	0.71	Moderate
Recruitment Consultants	3.38	0.79	Moderate
Walk-ins	2.94	0.88	Low

Employees recruited through campus placements and employee referrals exhibit higher early job performance with lower variability. Walk-in recruitment shows the lowest mean performance and highest variability, indicating weaker initial adjustment.

Table 2: One-Way ANOVA Results for Recruitment Channel and Early Job Performance

Source of Variation	Sum of Squares	df	Mean Square	F-Value	p-Value
Between Groups	9.84	4	2.46	5.37	0.001
Within Groups	55.72	125	0.45		
Total	65.56	129			

Since the p-value is less than 0.05, the null hypothesis is rejected. Recruitment channels have a statistically significant impact on early job performance.

Table 3: Recruitment Channel–Wise Employee Perception Analysis

Variable	F-Value	p-Value	Result
Job Satisfaction	1.21	0.31	Not Significant
Job Involvement	0.98	0.42	Not Significant
Organizational Commitment	2.63	0.036	Significant

Job satisfaction and job involvement do not differ significantly across recruitment channels. However, organizational commitment varies marginally, with higher commitment observed among campus and referral-based employees.

Employee Perceptions

The results indicate no statistically significant differences in job satisfaction and job involvement across recruitment channels. This suggests that internal organizational factors such as leadership style, work environment, and career opportunities have a stronger influence on employee attitudes than recruitment source.

However, employees recruited through campus placements and employee referrals reported slightly higher enjoyment of work and role clarity, indicating better alignment between expectations and actual job roles.

Early Job Performance

Significant differences were observed in early job performance indicators. Employees recruited through campus recruitment and employee referrals demonstrated higher punctuality, reliability, goal

achievement, and task completion. These channels provide better pre-employment information and cultural fit, enabling faster adaptation.

Employees recruited through job portals and recruitment consultants showed comparatively lower early performance, possibly due to limited interaction and weaker expectation alignment during the recruitment process.

HR Recruiter Perspective

HR recruiters rated campus recruitment and employee referrals as the most effective channels in terms of candidate quality and early productivity. Their evaluations align closely with employee self-reported performance, reinforcing the reliability of the findings.

IV. CONCLUSION

The study concludes that recruitment channels play a significant role in influencing early job performance, though their impact on job satisfaction and involvement is limited. Personalized recruitment methods such as campus recruitment and employee referrals consistently yield better early performance outcomes due to improved expectation alignment and person–organization fit.

Organizations should adopt a strategic approach to recruitment by prioritizing channels that foster interaction, transparency, and realistic job previews. Integrating recruitment strategies with onboarding and early performance management can further enhance employee productivity and retention.

V. APPENDIX

The appendix presents supplementary information supporting the study. Detailed questionnaire items, ANOVA output tables, and intermediate statistical calculations were prepared using spreadsheet-based tools. Due to journal space limitations, extensive numerical tables and raw response data have not been included in the main paper but are available with the author upon request.

VI. ACKNOWLEDGMENT

The author sincerely expresses gratitude to the faculty members of Siva Sivani Institute of Management for their continuous guidance and academic support throughout this research. Special

thanks are extended to the project guide for valuable insights, constructive feedback, and encouragement that contributed to the successful completion of this study.
